COMPLETE 4' X 8' MODULAR OUTDOOR KENNEL

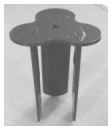

ASSEMBLY INSTRUCTIONS

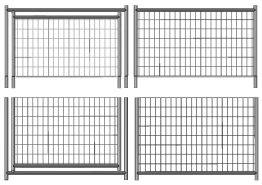

Congratulations on your purchase of high quality Modular Outdoor Kennel. This rugged yet attractive kennel is designed to provide years of dependable protection for your pet.

Please follow these simple instructions to insure the proper assembly.
NO TOOLS ARE REQUIRED
Assembly is fast and easy

PARTS INCLUDED:
(5) Side Panels - in two split sections each
(1) Gate Panel - in two split sections
Panel Connectors - 2 for each panel

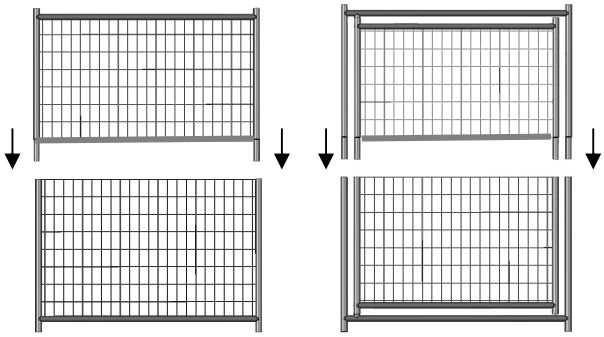

Step 1 - Carefully unpack and remove the banding from each of the bundled sections
CAUTION; when cutting the banding that holds the sections together, DO NOT cut the BLUE colored banding on the gate section until assembly is completed.

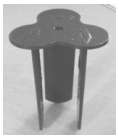

Step 2 - Assemble Each Panel Section

The top section of each panel is attached to the bottom section as shown here.
The "U" Channel on the upper section will fit firmly over the wire mesh of the lower section.

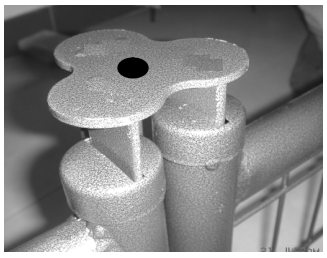

Once the two sections are properly connected they will be held in place with the "button lock".

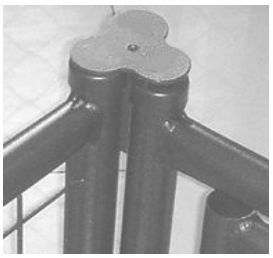

Step 3 - Assemble the Kennel

Connect the panels using the connectors provided with each panel.

Use the connector to first attach the bottom of each panel and then make the upper connection as pictured here.

One of the many advantages of this modular kennel is that the gate panel may be positioned at the location of your choice; on either end or anywhere on the sides.

The unused 3rd leg of the connector should be positioned on the outside of the kennel on both the top and the bottom of the panels. This design feature accommodates potential future kennel expansion.

Step 4 - Cut/Remove the BLUE colored banding holding the gate sections together.

Assembly is now completed. Enjoy your new Modular Kennel.

CAUTIONS:

Use caution to avoid tripping on the lower horizontal tube on the gate panel when entering and exiting the kennel.

Highly recommends that this kennel be secured to the ground particularly if an optional cover is added.
